PROJECTS

USER AUTHENTICATION & AUTHORIZATION

Authentication is the process of verifying a user's identity. In a MERN stack application, authentication is typically done using a username and password. The user enters their credentials into a login form, and the application verifies them against a database of registered users. If the credentials are valid, the user is authenticated and granted access to the application.

MOVIES SEARCH APP

This React app allows users to search for movies by title, genre, year, and rating. It uses the OMDB API to fetch movie data and display it in a user-friendly interface.

EXPERIENCE

INTERNSHIP

I completed a 6-month internship at, ICICEO Technology, located in Nagpur City, where I gained valuable knowledge. Worked on 3 main websites with Bootstrap React JS, tailwind CSS and more. I was working on Mostly Frontend. for all 3 Projects Collaborating with a dedicated team, I navigated challenges, contributed meaningfully to projects, and refined my problem- solving skills
